

Brava!® for EMC Documentum TaskSpace

View | Collaborate | Redact | Publish

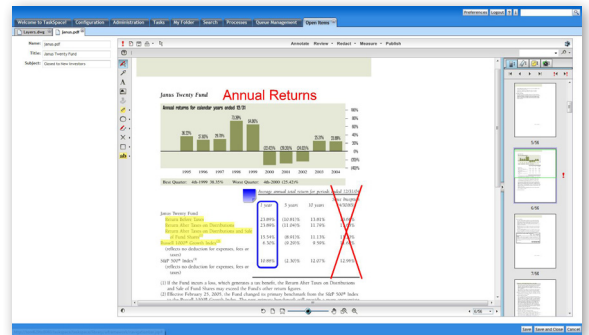

Simple Viewing and Annotation for Transaction-Based Processes

Brava!® for EMC Documentum TaskSpace is ideal for high-volume, transaction-based environments, making it easy to view and collaborate on virtually any file format, including office and PDF documents, CAD drawings and image files. Brava's task-based toolset exposes only required functions to the user; however, the interface can be designed to meet the custom needs of any processing application. Industry-leading performance means users don't have to waste time waiting for images to load and superior fidelity means users can read and process information faster. Brava is the perfect, lightweight viewer for transactional processes like loan origination, invoicing and claims processing.

Key Features & Benefits

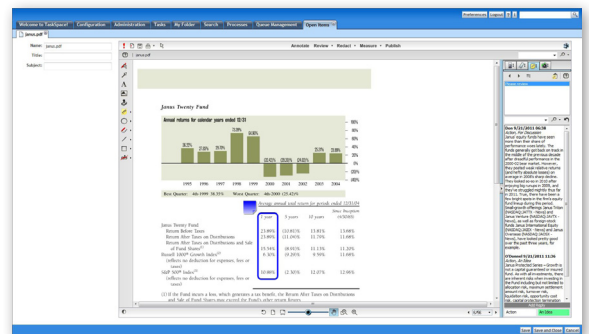

Browser-Based Viewing and Annotation

Brava has a modern interface for viewing and annotating virtually any file. This makes user adoption easy, training virtually unnecessary and eliminates the need to install the native application on every user's desktop. Brava menus are broken out by function, making it more intuitive to end-users, and the interface can easily be re-skinned to suit any working environment. Users spend less time waiting for files to open, refresh and transition than with other comparable viewers. Page thumbnails let users jump right to the page they need without having to navigate the entire document or image.

Changemarks® and Threaded Discussions

Brava helps teams collaborate more efficiently and can be used in a number of workflow processes. Changemarks® notations allow users to add comments to a document or drawing. And now with threaded discussions, Brava offers conversations—not just comments. Groups of users can reply to each other and accept or reject comments—recording a complete audit trail of both the discussion and the outcome. With threaded discussions, users can reply to comments made by other reviewers and indicate the status of the issue, like COMPLETED or PENDING. The list of status options is easily customizable.

What Our Customers Are Saying

"[Our company] remains very impressed with the quality of Informative Graphics' tools, customer service and account teams. Our markup and redlining work process is mission critical for the majority of our projects and the Brava tool suite continues to impress."

"Brava has been invaluable for streamlining our document review process. Very reliable and easy to use. Brava continues to be the standard to which all other markup tools are compared."

#1 Viewer Choice of EMC Documentum Customers

Brava was the first viewer to be accredited for the Designed for EMC program.

Technical Specifications

Supports virtually all office, image and CAD formats, including PDF

Available in English, German, French, Korean, Simplified Chinese, Japanese, Spanish, Dutch and Portuguese

Excellent Performance - In high-volume environments, fast loading is key. Brava loads files quickly and provides thumbnail views of subsequent pages.

Fidelity - Excellent fidelity is a must, and Brava has a proven reputation for accuracy.

Unified Viewer - Same easy interface for all file types with no user training required.

Page Thumbnails - Jump right to the needed page without navigating the entire document.

Annotations Saved as XML - Annotations are saved in a non-proprietary, open XML format, permitting import/export of annotations and pre- and post-processing as an integral part of any workflow.

Key Features & Benefits (continued)

Advanced Stamping, Watermarks and Banners

Brava's stamp features let users create custom stamps or add stock stamps to documents. Dynamic stamps allow organizations to create custom stamps that can pull metadata from the Documentum repository.

Not only does Brava allow you to control who can view and print documents, it allows you to force watermarks and banners to display for onscreen views and/or printed documents. These can contain information like user, date and even the IP address or host name of the user's machine. It can also include metadata and attributes from Documentum.

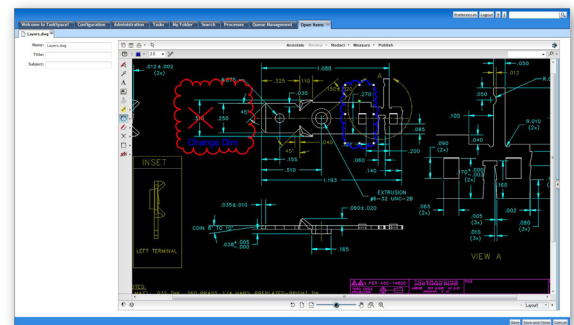

Intelligent Redaction Tools

Brava's redaction tools allow removal of sensitive information from documents, drawings and images, either automatically with intelligent pattern matching and text search or manually with area selection tools. Brava offers a redaction draft mode to accommodate review cycles; the ability to redact full pages rather than just selected areas; a filter capability to find redactions without reason codes (to address Freedom of Information requirements); and the ability to do partial redactions, useful for redacting all but the last four digits of a credit card or bank account number.

Working with CAD Files

With CAD files, vector data is not converted to pixels (rasterized), thus maintaining the integrity and fidelity of the drawing. A takeoff count allows users to count items on drawings such as doors and windows and aggregate areas for flooring or other materials for purchasing decisions. Users can create separate profiles for each count using different colors, and then create a report in a spreadsheet format.

And when sharing markups, Changemarks step reviewers through every comment and markup, ensuring nothing is missed. This feature is particularly important for large drawings and multi-page files.

Publish Documents

Files can be published to PDF, TIFF or Brava's own secure CSF. Burn in markups, add watermark or banners and decide whether to include hyperlinks and comments. IGC's proprietary, secure CSF format offers additional security for your documents with features like password protection and document expiration. It helps ensure that your documents are only viewed by the intended recipient and only within the timeframe specified.
