

Brava!® for EMC Documentum Webtop

View | Collaborate | Redact | Publish

Flash Viewer!

For users who are running a browser platform or device that supports Flash, Brava Flash lets them view and annotate documents and drawings from within Documentum Webtop with zero-client footprint.

#1 Viewer Choice of EMC Documentum Customers

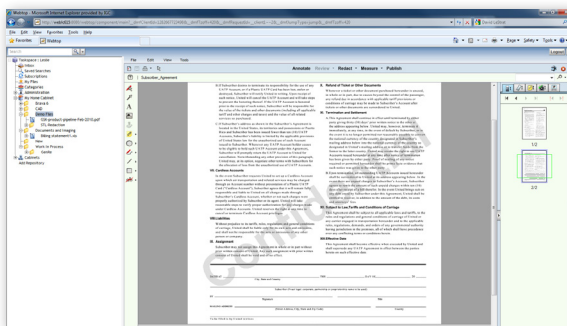

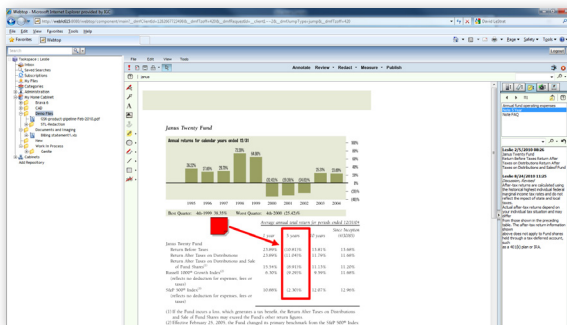

Brava was the first viewer to be accredited for the Designed for EMC program.

Brava!® for EMC Documentum Webtop makes it easy to view and collaborate on virtually any file, including office and PDF documents, CAD drawings and image files. And Brava eliminates the need to install the native application on every user's desktop. Brava's simple, easy-to-use interface makes large-scale deployments and rapid user adoption a reality in virtually any business environment and makes sharing documents safe and easy. The Brava integration with EMC Documentum manages markups and honors user printing rights and access control levels.

Key Features & Benefits

Browser-Based Viewing and Annotation

Brava offers a modern interface for viewing and annotating hundreds of file formats, making user adoption easy and training virtually unnecessary. The menus are broken out by function, making it more intuitive to end-users, and the interface can easily be re-skinned to suite any user's working environment. Brava provides industry-leading speed and fidelity for viewing and printing functions.

Changemarks® allow users to add comments to a document or drawing. And now with threaded discussions, groups of users can more easily collaborate and share comments. The tool lets users reply to each other and accept or reject comments—recording a complete audit trail of both the discussion and the outcome.

Advanced Stamping, Watermarks and Banners

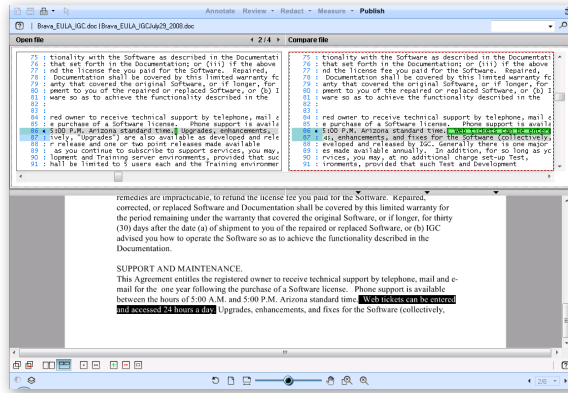

Brava's stamp features allow users to add stock stamps like APPROVED, REJECTED and CANCELED to documents or to create custom stamps. Bi-directional, dynamic stamps allow organizations to create custom stamps that can pull or push metadata from the Documentum repository.

Not only does Brava allow you to control who can view and print documents, it allows you to force watermarks and banners to display for onscreen views and/or printed documents. These can contain information like user, date and even the IP address or host name of the user's machine. It can also include metadata and attributes from Documentum.

Key Features & Benefits (continued)

Brava Compare

Compare different versions of a document or drawing with Brava's built-in comparison tool—useful for comparing drawing and document revisions/versions and faxed versus signed contracts. Brava offers pixel-to-pixel and text comparison modes so users can choose the view best suited to their file type. Comparison views can also include annotations for easy change verifications, ensuring no changes are left unincorporated.

Intelligent Redaction Tools

Brava's redaction tools allow removal of sensitive information from documents, drawings and images, either automatically with intelligent pattern matching and text search or manually with area selection tools. Brava offers a redaction draft mode to accommodate review cycles; the ability to redact full pages rather than just selected areas; a filter capability to find redactions without reason codes (to address Freedom of Information requirements); and the ability to do partial redactions, useful for redacting all but the last four digits of a credit card or bank account number.

Protect Sensitive Information and Share Documents Securely

Brava honors Documentum permissions to restrict unauthorized users from printing or saving documents locally. Brava can even prevent users from capturing information through the print screen command. This enables companies to share documents with users who have access to the Documentum Server, but prevents information from leaving the repository.

Users can publish to an encrypted, compressed format specifically designed to help companies control content that is shared outside the organization. This format is called Content Sealed Format, or CSF, and can be used to assign a password and expiration date and control the viewing and printing of any file.

Working with CAD Files

Changemarks step reviewers through every comment, ensuring nothing is missed. This feature is particularly important for large drawings and multi-page files. With CAD files, vector data is not converted to pixels (rasterized), thus maintaining the integrity and fidelity of the drawing. Brava's compare feature allows users to easily view at-a-glance any modifications that have been made to a drawing.

A takeoff count allows users to count items on drawings such as doors and windows and aggregate areas for flooring or other materials for purchasing decisions. Users can create separate profiles for each count using different colors, and then create a report in a spreadsheet format.

What Our Customers Are Saying

"[Our company] remains very impressed with the quality of Informative Graphics' tools, customer service and account teams. Our markup and redlining work process is mission critical for the majority of our projects and the Brava tool suite continues to impress."

"Brava has been invaluable for streamlining our document review process. Very reliable and easy to use. Brava continues to be the standard to which all other markup tools are compared to."

Supports virtually all office, image and CAD formats, including PDF
