

Brava!® for IBM FileNet P8

View | Collaborate | Redact | Publish | Secure

Brava!® for IBM FileNet P8 makes it easy to view and collaborate on virtually any file, including office and PDF documents, CAD drawings and image files. And Brava eliminates the need to install the native application on every user's desktop. Its easy-to-use interface makes large-scale deployments and rapid user adoption a reality in virtually any business environment and makes sharing documents safe and easy.

Flash Viewer!

For users with Flash-enabled browsers or devices, the Brava Flash client lets them view and annotate documents and drawings from within FileNet with zero client footprint.

Key Features & Benefits

Multi-File Viewing

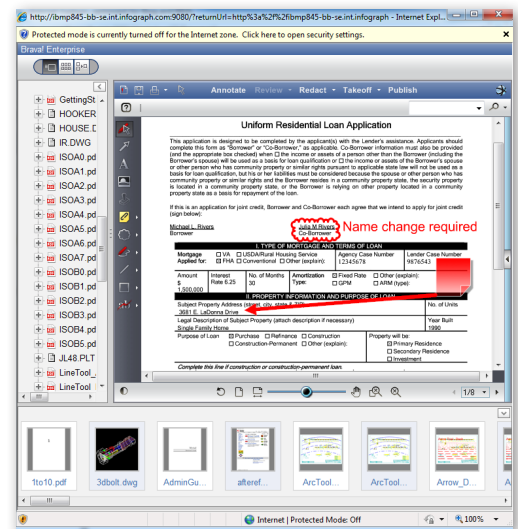

The Brava integration allows users to browse document folders quickly. FileNet P8 users can select multiple documents from the Workplace/XT interface and load them for easy viewing in the Brava Browser. Users can expand a document to see associated markups and even specific Changemark® comments, making collaboration easier than ever.

Markups and Annotations

Original files are never modified; annotations are saved as a separate, overlaid XML file with the original document in the FileNet repository. Each annotation layer is associated with the author's username and marked with the date and time. Users with appropriate permission levels can consolidate all user markups and annotations into a single file. Brava's annotation features include shapes and lines, highlighting, text boxes, stamping and more. The stamping feature allows users to create custom stamps or add stock stamps to documents.

Document Merging and Splitting

With a simple graphical interface, users can combine documents or selected pages simply by dragging thumbnails of the desired pages. Users can select individual pages from multiple documents—even different file formats—and merge them into a single TIFF, PDF or secure CSF document. The Document Merge module can even be used to split documents.

Brava offers the features companies need, including annotation, text compare, threaded discussion and thumbnail views—making Brava the clear leader in viewing and collaboration software.

Technical Specifications

Integrates to IBM FileNet P8 versions:
4.0, 4.5, 5.0, 5.1

Recommended end user OS: Windows 7,
XP SP3 and Vista

Recommended end user browser:
Internet Explorer 7.0 or greater;
Mozilla Firefox 3.6 or greater

Recommended Server OS: Windows
Server 2003, 2008 and 2008R2

Supports Microsoft Office 2010 and
virtually all office, image and CAD
formats, including PDF

Enhanced 508 Compliance

License Server Failover

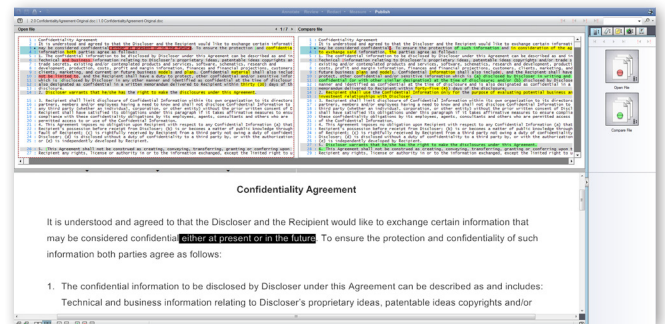

Key Features & Benefits (continued)

Enhanced Collaboration Capabilities

Changemark annotations allow users to add comments to a document or drawing. With threaded discussions, groups of users can more easily collaborate and share comments. The tool lets users reply to each other and accept or reject comments—recording a complete audit trail of both the discussion and the outcome. Entire discussion threads from multiple users can be viewed within the Brava Browser interface.

Brava Compare

Compare different versions of a document or drawing with Brava's built-in comparison tool—useful for comparing drawing and document versions and faxed versus signed contracts. Brava offers pixel-to-pixel and text comparison modes so users can choose the view best suited to their file type. Comparison views can also include annotations for easy change verifications, ensuring no changes are left unincorporated

Brava can compare text, image and even CAD drawings—visually highlighting differences between versions. Users can even compare documents in different formats, such as Word to PDF renditions.

Watermarks and Banners

Organizations can force watermarks and banners to display for onscreen viewing or printing documents. Watermarks and banners can contain information like user, date and even the IP address or host name of the user's machine, as well as metadata from FileNet.

Redaction Capabilities

With broader requirements for information sharing, tighter regulations on privacy protection and greater focus on protecting proprietary and sensitive data, Brava's redaction capabilities are essential. Brava's redaction tools permanently remove sensitive information from documents, drawings and images, so that the information cannot be retrieved. Brava's redaction tools allow removal of sensitive information either automatically with intelligent pattern matching and text search, or manually with area selection tools. Users can add reason codes to identify why information is being redacted, ensuring compliance with regulations and policies.

Publish Documents

Files with annotations, watermarks and redactions can be saved with their markups then published to PDF, TIFF or Brava's own secure CSF. IGC's proprietary CSF format offers additional security like password protection and file expiration, ensuring that your documents are only viewed by the intended recipient and only within the time frame you specify.

Working with CAD Files

Changemark notes step reviewers through every comment, ensuring nothing is missed. This is particularly important for large drawings and multi-page files. With CAD files, vector data is not converted to pixels (rasterized), thus ensuring the best possible fidelity at any zoom level. A takeoff count allows users to count items on a drawing such as doors and windows and aggregate areas. This information is helpful in making materials purchasing decisions. Users can create separate profiles for each count using different colors, and then create a report in a spreadsheet format.
